Abstract (en)  
[origin: WO02086383A1] The invention relates to a headlight with a housing, in which light-generating and light-forming elements are arranged. The front part of the housing or a top, insert or attachment linked with the front part of the housing, is provided with at least two fixing claws for fixing accessory parts such as a diffuser, color film filter or wing elements that can be mounted on the light outlet of the headlight by means of the fixing claws. The fixing claws (510, 520, 530, 540) are characterized by one elastic element (7) each or configure such an element on which an accessory part held by the fixing claw (510, 520, 530, 540) rests, thereby reducing undesired clattering noises.
