Abstract (en)

[origin: DE10120208C1] The arrangement has a connector group per module on which a housing is placed. Each group has 2 connector elements for connecting leads and a region via which connector elements can be electrically connected together. The connecting regions are encapsulated by the housing. Openings are arranged in the housing for the connector elements. The housings are identical and the connector elements of the first group are different from those of the second. The arrangement has an electrical connector group (1) per module on which a housing (90) is placed. Each group has two connector elements (2,3) for connecting leads and a connection region via which the connector elements can be electrically connected together. The connecting regions are encapsulated by the housing and openings are arranged in the housing for passage of the connector elements. The module housings are identical and the connector elements of the first connector group are different from those of the second group.
