Abstract (en)

[origin: WO02084949A1] A method for installing new network nodes in a users network, which users network comprises a communication network (RE) connected to network nodes (NR) associated to the users, each network node (NR) being associated to a control and interface system (N, AI) being suitable for exchanging information on the communication network (RE); moreover, one or more network nodes (NR) being configured as an installer node (NI), comprising to that purpose registering means (R) of the users connected to the users network, the installer node (NI) being associated to a domain (D), said method providing installation of a new user (NNR) through at least a communication phase (103, 107) of identity information (ID) to the registering means (R) of the users connected to the users network associated to the installer node (NI). According to the invention, the method provides for the new network node (NNR) to execute an recognition phase (105) of the installer node (NI) and of its pertaining domain (D).
