Abstract (en)

[origin: EP1382541A1] A container (2) holding a first product and fitted with an applicator (4) is closed by a cap (3) with a cavity for a second product, contained in a detachable section (7) of the cap. The first product is, for example, in the form of a solid block, with part of the block acting as the applicator surface (4a), or a separate applicator can be held in the lower part of the cap. The detachable part of the cap can be made from a different material to the main section, or have a different colour.
