Abstract (en)

[origin: EP1382725A1] The rotating dobby for a loom incorporates a mechanical component (15) to act on at least one lever (11) in a shifting movement (F3), while its hook (113) is disengaged from the wedge blocking surface (31), on meeting the action from the elastic retainer spring (13). It does not interfere with the angular shift movement of the selector (201).
