Abstract (en)

[origin: EP1382838A2] The valve has an actuator with a piston, a lifting piston interacting with the actuator piston via a pressure medium, a valve needle interacting with the lifting piston with a valve closure body, a valve seat body and a seal seat. The actuator piston has at least one step bounding on a damping chamber spatially separate from a working chamber and shaped or arranged so that the pressure medium can flow to or from it via a choke point. The valve has a piezoelectric, electrostrictive or magnetostrictive actuator (4), an actuator piston (9), a lifting piston (15) interacting with the actuator piston via a pressure medium and working chamber (26), a valve needle (20) interacting with the lifting piston with a valve closure body (22), a valve seat body (21) and a seal seat. The actuator piston has at least one stage bounding on a damping chamber (27) spatially separate from the working chamber and shaped or arranged so that the pressure medium can flow to or from it via a choke point (30).
