Abstract (en)

[origin: WO02085131A1] The method of the invention produces a savoury flavoured product from a source of protein using a combination of two distinct strains of bacteria. The source of protein may be a plant soy, wheat or rice- but is preferably milk or whey. The first strain of bacteria is selected from the group *Macrococcus*, *Micrococcus*, *Enterococcus*, *Staphylococcus*, *Brevibacterium*, *Anthrobacter* and *Corynebacterium*, preferably *Macrococcus caseolyticus*. The second strain of bacteria is selected from the lactic acid bacteria - *Lactococcus*, *Lactobacillus*, *Pediococcus* or *Leuconostoc*. The protein source is fermented with the bacteria at a pH above the isoelectric point of the protein, preferably at a pH of 5.5-6.5. The savoury flavoured product may be combined with other ingredients to form products such as cheese, protein-water gels, yoghurts, creams, custards, sauces and confectionary products.
