Abstract (en)
[origin: US2004169043A1] The present invention relates to a packaging for liquids (1). It consists essentially of a body (2) with a parallelepiped format whose height to width ratio is less than 1 and it has a lower inner part consisting of two planes (3) that are slightly inclined towards the central part in order to facilitate the suction of the liquid, and an upper surface with a central area (4) with an opening (5) and the respective cover (6) which, when removed, allows the inside of the packaging to be accessed, as well as its liquid through a telescopic tube (7). This packaging can also contain a gift place inside, at the bottom which is duly protected from contact with the liquid and is accessed after the liquid has been drunk by breaking the brittle area (14) of the upper surface.
