Abstract (en)

[origin: WO02090722A1] The invention relates to a turbocharger (12) comprising a radial compressor, in which, in the event of a compressor wheel bursting, housing parts (28, 20) or components (32) fixed to the compressor housing (24, 26, 28) are prevented from axially spinning away. Said turbocharger comprises a burst protection device (34) having an inner wall (20) which radially and externally defines a flow channel (18) above the rotor blades (16) of the compressor wheel (14), said inner wall being provided with a breaking point (36).
