Abstract (en)

[origin: DE10118794A1] The transaction signing method has a data network used for transmission of transaction data to a subscriber terminal (E,M) having a user interface (E) and a security module (M) for generation of a digital signature for signing for the transaction (TR) upon reception of digital certification contained within transaction data. Also included are Independent claims for the following: (a) a mobile telephone terminal for digital transaction signing method; (b) a chip card security module for a digital transaction signing method
