Abstract (en)

[origin: WO0142989A2] A facility provides the mechanism for customizing output of content based on the device type of the destination device. As a result, different destination devices may receive output content in distinct formats when requesting the same content. The facility may be implemented in software and run on a server, such as a web application server. The facility includes a mechanism for identifying the device type of a device that is requesting content. In addition, the facility includes an ability to apply a stylesheet or other mechanism for customizing format based on device type.
