Abstract (en)
The present invention relates to a device constructed as a specific extension part for so-called weed mowers for removing, mainly as rotating sweep instrument, of plants, weeds, dirt and such from paved surfaces, in which the extension part consists of a small brush disc (1) with pick-up spaces (2) made by milling out a solid round disc (1), in which the pick-up spaces (2) are quadrangular for locked receipt of an also well fitting quadrangular cover (3) with wire bundle (4) which wire bundle (4) normally sticks out straight from underneath the disc (1), in which the locking from the centre is done from a polygonal recess, in which the locking is adjustable and easy to operate with a matching special open-end spanner (14), which is flanged near the end to create a surprisingly simple and very solid attachment of the mentioned cover (3) with wire bundle (4) in the mentioned disc (1). <IMAGE>
