Abstract (en)

A scuffing machine (10) is provided for finishing the surfaces of continuously advancing wood products. The machine includes a frame (12) defining a scuffing station (14), with a conveyor (18) for transporting the wood products through the scuffing station (14) in a generally horizontal feeding direction (A). A plurality of scuffing brushes (26) are mounted on the frame (12) at the scuffing station (14) for rotation about vertical axes (28). Each scuffing brush (26) includes a plurality of elongated, vertically extending bristles (64) which terminate in distal ends for engaging the wood products. <IMAGE>
