Abstract (en)

[origin: EP1384691A1] The lift and swing device includes a load cell (9) connected between the holder (4) for the bins and the lifting and swinging mechanism (2) and is to determine the tipped out waste weight. The load cell is installed in an inclined position in such a way that it occupies a vertical orientation in an intermediate pivoted position of the bin holder between its loading position and tip-out position. In the loading position of the bin holder the load cell is inclined at an angle of preferably 30 degrees to the vertical.
