Abstract (en)

[origin: EP1384843A2] The lock mechanism to open and close a vehicle flap (10) has a dirt-free handle (33) in addition to the lock (20) with its lock drive (21). The lock drive on one side and the handle drive (31) on the other side have a common drive (23), only at the lock or the handle. The exit and entry of the lock or handle drive are connected by a coupling (40). When the common drive is activated, the coupling has the dual function of controlling both the lock and the handle drives.
