Abstract (en)
[origin: DE10233331C1] The switch device has a dished base part for reception of an electrical circuit board provided with the electrical/electronic components for the required switch functions and at least one operating button (2) which can be moved in different directions, provided with operating cams for microswitches mounted on the circuit board on its underside. The operating button has at least one transparent light exit region provided by the end of a light guide rod, illuminated by a light-emitting diode mounted on the circuit board and coupled to a light guide ending in a light output region (9) in one of the shorter sides (12) of an intermediate frame (3) below the operating button.
