Abstract (en)
[origin: US2003174211A1] In a mobile terminal device equipped with an eye imaging device which can properly shoot an eye image without failure for personal authentication, an eye image shooting section (16) for personal authentication is arranged in close proximity of the upper section (distal side) of the liquid crystal display (13) on the front of a main unit casing (11) of the cellular phone. An image pickup lens of the eye image shooting section (16) includes a reflecting telephoto lens. An illumination section (17) is arranged above an operation button section (12) in close proximity of the lower section (proximal side) of the liquid crystal display (13). On the front surface of the cellular phone, the eye image shooting section (16), the liquid crystal display (13), the illumination section (17) and the operation button section (12) are provided in this order from top to bottom.
