Abstract (en)

[origin: FR2823091A1] The waste compacter consists of a cylindrical storage chamber (1) to receive vacuum cleaner dust and waste (9) separated from the suction air flow, a sliding piston (12) with seals (14), and a ring (6) containing a liquid (16) round the base of the cylinder. The ring is connected to the inside of the chamber so that the waste can be compacted into solid cakes for disposal, the liquid being water which can contain bleach or disinfectant, and a substance which causes it to solidify as a result of contact with air, heat or light.
