Abstract (en)
[origin: WO02079058A1] A roll handling base comprising a base frame (1), a first level (9b) arranged on it to receive roll (4) and, further, a second roll-receiving level (9b), whereby said levels can be moved so that into the V-angle formed by means of them a roll (4) can be received and discharged from the said V-angle. In the edges of said, against each other directed levels, or directly between the levels, there is a pivoted arrangement (8), by means of which both levels can be separately turned into roll receiving position, roll transporting position, (V-angle) and roll discharging position by means of hydraulic cylinders (5), which cylinders are placed above or underneath said levels.
