Abstract (en)
[origin: FR2823510A1] The manufacturing plant for mats formed from continuous filament roving, esp of glass fibres, issuing from bobbins and projected onto a conveyor (10) consists of at least one bobbin on a spindle (2), and guide (5, 6), traction (7) and projection (8) members which are fixed and located one after another on the same level. The projection member comprises an oscillating arm to project that filaments transversely onto the receiving conveyor (10). The plant also has a monitor and regulator (3) for the spindle speed according to the bobbin's outer diameter.
