Abstract (en)

[origin: EP1386732A1] A flow of medium (4) is produced, containing image-forming components. The flow is continuous or pulsed. It is passed through a gap (A) between a laser writing head and the printing plate (1) cylindrical surface. Laser (2) beams penetrate the flow. This separates image-forming components from it. They are molded onto the printing plate cylinder. An independent claim is included for corresponding equipment.
