Abstract (en)

A dispensing closure 10 for a container 12 containing a flowable product, such as bath gel. The closure 10 comprises a body 16, adapted to secure the closure 10 to the container 12, and defines a dispensing orifice 26, through which product may be dispensed by a user of the container. The closure 10 further includes a lid 28, connected to the body 16 by a hinge 30. The body 16 has an upper deck portion 18 and the lid 28 includes a cover portion 32 and a downwardly depending sidewall portion 34. The downwardly depending sidewall portion 34 of the lid 28 and the upper deck portion 18 of the body 16 are configured to form therebetween a watertight seal when the lid 28 is in its closed position on the body 16. To achieve this, the lid 28 and the upperdeck portion 18 may have complimentary structures 42, 44 adjacent to the hinge 30 and preferably additional complimentary structures 46,48, adjacent to a thumb tab area, which cooperate to form a watertight seal in these areas. <IMAGE>
