Abstract (en)
The present invention relates to an elevator cage (1) having a fixing member (8) removably attached to a safety fence to be assembled on a cage top (1a), wherein the fixing member (8) is fixed to a position close to a doorway when the safety fence is folded down. As a result, when performing maintenance and inspection, a service technician removes the fixing member (8) to get on the cage top (1a) and assembles the safety fence through use of the fixing member (8), thereby avoiding a chance of the service technician performing an operation without assembling the safety fence.
