Abstract (en)

[origin: WO02083513A1] A recloseable bag for marinating food including a flexible plastic sheet having side edges, a flexible foil sheet having side edges and sealed to the flexible plastic sheet along the edges of the sheets to form a generally rectangular bag having first and second ends and opposed sides, a recloseable closure joining the flexible plastic sheet and the flexible foil sheet adjacent the first end of the bag, and an arcuate rupturable seal extending from one opposed side to another opposed side and joining the flexible plastic sheet and the flexible foil sheet. The arcuate rupturable seal, the opposed sides, and the second end form a marinade storage compartment. A top of the arcuate rupturable seal is approximately centrally located between the opposite sides, and the recloseable closure, the opposed sides, and the second end form a food storage compartment for marinating food upon opening of the arcuate rupturable seal.
