Abstract (en)

[origin: US2004118842A1] The present invention describes an inliner (1) which is used for transporting lysine in containers. This inliner (1) has preferably been produced from woven, coated polypropylene and has the following features: a cuff (4, 5) at each of the upper and lower margins of the rear face (3) for fixing and securing the inliner (1) within the container where appropriate a cuff applied to the upper or lower margin of the front face (8) and serving for fixing the inliner (1) within the container feed apertures (9) on the front face (8), these feed apertures (9) having been applied at the upper margin of the front face (8) discharge apertures (10) on the front face (8), these discharge apertures (10) having been applied at the lower margin of the front face (8) two straps (12) applied along the edges of the front face (8), each of which has at least one clasp (13), these serving for suspension on steel bars.
