Abstract (en)
[origin: WO02090983A2] An immunoassay kit for the qualitative and quantitative determination of a sample by means of specific binding partners, such as, for example, antibodies, antigens, receptors and ligands comprises a support or microtitre plate with a number of recesses. Said support or microtitre plate is pre-coated with a primary binding partner and the binding partner is applied and fixed as a lyophilisate. In addition a reference standard series of the sample to be determined lies in a part of the recesses of the microtitre plate with incremental dilution in lyophilised form.
