Abstract (en)
[origin: US2004122691A1] A device and method of ordering products via a communication network, such as products produced at least in part upon customer request, such as motor vehicles, where a product order is input via at least one decentralized data terminal and transmitted to a central server via a communication path that is set up. The device includes a central server to which decentralized data terminals may transmit data pertaining to a product order via a communication path.
