Abstract (en)

A method for supplying a toned paint by weighing and blending one or more types of granular color materials and a base paint and agitating and mixing them, characterized in that selection of a granular color material and the blending quantity of the granular color material are automatically decided from a prepared toning database by inputting a desired color or a color measurement result of an existing color and the weight of the base paint to a computer and supply of the granular color material is controlled. A weighing-toning system used for the toned-paint supplying method includes control means for deciding selection of a granular color material and the blending quantity of the material for a prepared toning database in accordance with a desired color or color measurement result of an existing color and the weight of a base paint, means for selecting and weighing (5) a granular color material in accordance with a command supplied from the control means, and means for supplying (4) the weighed granular color material to a vessel in which a base paint is stored and uniformly agitating and mixing the base paint and granular color material in the vessel. <IMAGE>
