Abstract (en)

[origin: EP1388625A1] The support determines a structure based on vertical struts (1) with brackets (2-2') for the fastening of horizontal posts (4) and diagonal crosspieces (5), forming a modular structure which can be secured abutting upon others identical, each module being complemented at the top with a finishing terminal constituted for each strut (1) by a tubular portion (14) of the same configuration as the strut (1), with a spindle (15) finished at the top in a rounded head which in turn rests on a flat head (17) for support of the corresponding load, either shuttering or a load-bearing deck, that upper finishing terminal being complemented by some tensioning members formed by bars (20) connected with an intermediate tensioning member (21) threaded thereto in reverse fashion. The struts (1) at their lower end are fastened to a sustaining base properly anchored on a concrete footing with appropriate mortar and levelling screws. <IMAGE>
