Abstract (en)  
[origin: WO02092299A2] The invention relates to a hand drill comprising an integrated height guide (5) for controlling the drilling angle, to which a pedestal is attached (6). Said drill has a compact construction with a low height, thus making it particularly light and easy to use. The drive motor (2) is located in the handle of the hand drill, in the manner of an angle drill and the clearance of the drill chuck is proportioned for conventional drill lengths in such a way that the device can be placed on different surfaces in any position in the room using one hand, whereby a pressure on the handle drives the drill chuck towards the workpiece.
