Abstract (en)

[origin: WO02094691A2] The invention relates to a manipulation device for displacing objects, comprising a first displacement element with a first displacement zone and a second displacement element with a second displacement zone, said displacement zones overlapping each other. The first displacement zone and the second displacement zone are located on a common transport plane. The first displacement element is provided with first guide means, which are arranged above the transport plane and the second displacement element is provided with second displacement means, which are arranged below the transport plane. The invention enables a precise displacement of objects within the entire transport plane.
