Abstract (en)
The platform is constituted by assembly to each other of two plates (1) and (2) equipped with complementary means of matching (9) and (12), as well as with a tubular and lower formation (3-4) on the end opposite to that of the respective means of assembly (9-12), tubular formation (3) or (4) determining a stiffening of the respective plate, with the particularity that plate (2) , in correspondence with the respective means of assembly (12), has an inverted-T profile (14) which collaborates in the stiffening of the plate. The platform determined by those two plates (1) and (2) is made of aluminium and is supplemented with some lower crosspieces (16) on which rest profiles (14), the ends being closed with brackets (18) equipped with conventional hooks (19) for hanging the platform (16) with respect to the structure of a scaffold. Optionally, the platform can be of greater width it only being necessary to insert a plate (22) equipped with means of assembly (9') and (12') similar and complementary to means of assembly (9) and (12) of plates (1) and (2). <IMAGE> <IMAGE>
