Abstract (en)
[origin: EP1250898A1] The invention relates to a system for intervertebral disk prostheses, comprising standard and corrective prostheses. The corrective prostheses are used to compensate for a ventro-dorsal shift, and are characterised in that the surface (4') by which means the covering plates (15) co-operate with the prosthesis core (3') in an adapted manner is ventro-dorsally staggered in relation to the connecting surface (7), compared to standard prostheses.
