Abstract (en)

[origin: WO02088181A2] The present invention relates to the use of an MRP8/MRP14 heterodimer, or of its individual components in combination, of at least one nucleic acid encoding the entire heterodimer or its individual components in combination, or of a cell which is expressing the entire heterodimer, or its individual components in combination, for treating and/or preventing skin diseases, wounds, and/or wound-healing disturbances which are characterized by a reduced quantity of MRP8/MRP14 heterodimers, in particular diabetes-associated wounds, and to methods for identifying pharmacologically active substances which exert an influence on the function or expression of MRP8/MRP14 heterodimers.
