Abstract (en)
[origin: WO02094675A1] The invention relates to a holder for recycling bottles (2) made of plastic, comprising a base plate (3) and means (4) which are used to anchor said bottles and which are arranged on the upper side (17) of the base plate (3), engaging in indentations (6) disposed on the bottoms (5) of said bottles. The invention also relates to a recycling bottle (2) made of plastic for one such holder (1), comprising an indentation (6) disposed on the bottom (5) of the bottle. In order to facilitate handling of said bottles for recycling, to automatically determine the deposit of the bottles (2) and to enable said bottles (2) to be recycled in a simple, quick manner, the diameter of the anchoring means (4) becomes smaller in the direction away from the upper side (17) of the base plate (3) and barb-type recesses (7) are provided, whereby the bottles (2) are maintained in an optimum position on the holder (1). The base plate (3) is advantageously disposed inside the projection of the bottles (2) on said base plate (3).
