Abstract (en)

[origin: WO02092866A2] The invention relates to a composite material, comprising a hard metal or cermet substrate body, coated with at least one diamond layer. According to the invention, the adhesion of the diamond layer on fine-grained hard metal or cermet substrate bodies may be improved, whereby the C content of the hard metal or cermet substrate body lies between 89 % and 99 %, preferably between 94 % and 99 % of the maximum possible content at which C porosity occurs, or, for hard metal substrate bodies with Co binder, the magnetic saturation polarisation is 89 to 99 %, preferably 94 to 99 % of the maximum saturation polarisation $4 \pi \text{ sigma max} = 2 \text{ Co} - 2,2 \text{ Cr}_3\text{C}_2$, (Co and Cr₃C₂ each given in mass % and $4 \pi \text{ sigma max}$ in $\mu \text{ T} \cdot \text{m}^3 \cdot \text{kg}^{-1}$).
