Abstract (en)

[origin: WO02097224A1] The invention relates to a remote-controlled unit (20) for operating a door opener (12). According to the invention, said remote-controlled unit (20) is supplied with power in such a way that current is drawn from the transformer (13), which supplies the door opener (12), via the door opener (12), said current being so weak that the door opener (12) is not activated. The remote-controlled unit (20) can therefore be installed in all locations that have or are to be provided with a button for operating a door opener, without the laying of new lines.
