Abstract (en)

[origin: WO02095482A2] The invention relates to a pair of glasses comprising a bridge which connects the two lenses, and hinges which are applied to the lenses, and carry the side pieces. Said lenses are connected to the hinges and the bridge by means of a fixing device (1). The invention is characterised in that at least one fixing device (1) comprises a U-shaped wire strap (2) which is inserted into a bore hole in the lens and is secured by means of a stopper (3) in such a way that the wire is pressed in a non-positive manner into axially extending grooves in the wall of the bore hole. The invention also relates to one such fixing device (1) for a pair of glasses, by which means the lenses in the glasses are connected to the hinges and the bridge. Said pair of glasses is characterised in that at least one fixing device (1) comprises a U-shaped wire strap (2) which is inserted into a bore hole in the lens and is secured by means of a stopper in such a way that the wire is pressed in a non-positive manner into axially extending grooves in the wall of the bore hole.
