Abstract (en)
[origin: WO02098197A1] The invention relates to a plug-in card comprising a fixing device (1), which is arranged on a lateral edge of the printed circuit board (2) and comprises a first and a second fixing element (3, 4). The first fixing element (3) is secured on the printed circuit board and the second fixing element (4) can be secured to a housing (10), in which the plug-in card is received, by fixing means (6). The inventive plug-in card is characterised in that the first and the second fixing element are interconnected either in a mobile manner, using a plug-in connection, or in one-piece with an additional predetermined breaking point.
