Abstract (en)

[origin: WO02098196A1] The subrack has a slot for the terminal strip (4) embodied as a self-supporting, autonomous modular unit. By means of the mirror-image arrangement of the fixing points in the subrack, the terminal strip (4) can be selectively assembled in such a way that external lines coming from the front or back side of the subrack can be connected to connecting components (5) of the terminal strip (4).
