Abstract (en)
[origin: EP1391389A2] The invention relates to a wall panel for a box pallet, which box pallet comprises: a generally rectangular pallet serving as support base, for instance comprising: a lath base, the laths of which are mutually connected by cross-laths, and a number of supports for placing the pallet on a ground such that some space remains clear under the lath base, such that the pallet can be lifted by means of a fork-lift truck or other lifting means, and four standing wall panels which can be coupled releasably to the pallet and to each other; which wall panel comprises: a number of mutually parallel vertical laths which are held at chosen mutual distances by two metal horizontal first profiles which are coupled non-releasably to the respective ends of the laths. <??>The wall panel according to the invention has the feature that each first profile has a prismatic, general U-shape, wherein the legs of the U extend over the side surfaces of the laths and are coupled thereto. <IMAGE>
