Abstract (en)

[origin: WO02089572A1] The invention concerns natural or artificial culture supports and preservation media for cut flowers enriched with active substances. Said active substances consist in acylamino acids salified or not by basic amino acids, or by trace minerals, some of which being endowed with antioxidant properties. The invention also concerns culture supports and media for preserving cut flowers enriched with butyric or free caprylic acids, or salified by basic amino acids or by trace elements, as well as by plant extracts, characterised by their antioxidant properties.
