Abstract (en)
[origin: WO02091898A1] The invention concerns a device for cleaning floor mats, carpets or the like by suction comprising a suction nozzle (1) consisting of a tubular handle (2) and a suction head (5), delimiting a suction chamber (11) wherein emerges a compressed fluid intake tube (6) connected to a compressed fluid source (7). The invention is characterised in that the compressed fluid intake tube (6) consists in a capillary tube (6) extending globally parallel to the tubular handle (2) and emerging in the suction chamber (11), said capillary tube (6) extending from the upper part of the suction tube (5) to the median part of said head (5) and said suction head comprises at least an air intake orifice (13, 15).
