Abstract (en)

[origin: WO02098727A1] The invention comprises a transport arrangement (10) for cabin elements in ships or the like, which arrangement requires less space than the cabin (16) arranged to be formed thereof. The transport arrangement (10) comprises two basic cabin elements (12,14) and means to join them into a finished cabin (16). Both basic cabin elements (12,14) comprise at least one side wall (24,26) and a part of the roof (28a, 28b). A part (30) of one end wall is detached from the basic cabin elements (12,14) along substantially its entire vertical dimension. In the transport arrangement (10) the basic cabin elements (12,14) are arranged in a staggered manner, so that the side walls (24,26) of the cabin are a staggered distance (L) closer to each other than in a finished cabin (16).
