Abstract (en)  
[origin: WO02079027A1] The invention relates to a safety and rescue device comprising a reversible life raft and tent shelter(s). The inventive device consists of an inflatable grid which is fitted with handles, safety belts and openings that can be unlocked, spread open and relocked. Bags (11) are fixed to said grid which contain membranes that open out into one or more shelters (8) and floors (7) thereby creating multiple or individual spaces. The whole structure is made completely detachable, including in relation to the ballast, by means of a system of securing elements that are disposed on both faces of the boat. Male securing elements are fixed to the handles (4) and bags (11) and female securing elements are fixed to the tubes. If the life raft is deployed upside down, said securing elements can be used to reassemble it right side up.
