Abstract (en)

[origin: WO02097176A1] The invention relates to an attachment for an opening, grading or combing device on textile machinery, such as for example a circular comb, top comb, card, spinning machine or similar, comprising a number of needles or saw-tooth punching parts, which execute an opening, grading or combing movement in relation to a fibre band. The invention is characterised in that a movement of at least one part of the needles (7) or saw-tooth punching parts (12) is superimposed on the opening, grading or combing movement, with at least one component moving perpendicular to said opening, grading or combing movement.
