Abstract (en)
[origin: WO02092995A1] A fuel injection valve (1) comprising a magnet coil (10) which co-operates with an armature (20) which is impinged upon by a return spring (23), said armature forming, together with a valve needle (3), a valve part which is axially moveable. A valve sealing body (5) is provided on the valve needle (3), forming a tight seat with a valve seat body (5). A flange (14) penetrating the armature (20) via a recess (19) of said armature (20), connected to the valve needle (3) in a non-positive fit, is provided with at least one radial fuel channel (11) which is used to connect an inner area (29) of the fuel injection valve (1) to a recess (22) of the valve needle (3) when the fuel injection valve (1) is actuated.
