Abstract (en)

[origin: EP1393790A1] The progressive brake for a cable platform has a stop (2) freely sliding on the support cable (1) and guided for translation on it. The brake has a progressive bias actuator (3) connected to the stop and exerting a return force towards a neutral position. The intensity of the force is increased with the movement of the stop from the neutral position. the bias actuator can be a bias weight. Claims include a station for a circulating cableway.
