Abstract (en)

The coating device which has an atomiser and drive turbine (101) includes a heating device (115) for heating the gas flowing through the atomiser or parts of the atomiser and/or coating machine which are in heat-conductive connection with the gas flowing through the atomiser. The heating device which warms up the air flowing into the atomiser can have a heat exchanger (116) through which air from the turbine motor can pass. Independent claim describes method for controlling operation of coating device where gas flowing through atomiser or parts of the atomiser are heated by a heater.

Abstract (de)

In einer Beschichtungseinrichtung mit einem Rotationszerstäuber ist zur Vermeidung der Kondensation der Sprühkabinenluft an durch die entspannte Abluft der Antriebsturbine (101) des Zerstäubers abgekühlten Bauteilen eine Heizeinrichtung (115) vorgesehen, mit der durch den Zerstäuber fließende Luft oder mit dem Ausgangsweg (113) der Turbinenabluft in wärmeleitender Verbindung stehende Bauteile erwärmt werden.
