Abstract (en)
A sheet metal bending machine (1) comprising two or more bending stations (2) disposed in series, wherein each station (2) is provided with two opposed forming rollers (3, 4) able to define the bending profile of the sheet metal. Each forming roller (3, 4) is composed of a pair of rotating elements (3a, 3b; 4a, 4b), coaxial and facing each other. Means are also provided to vary the distance between the rotating elements of each pair.
